ABSTRACT

Globalization Era is characterized by the borderless between countries which the information, invest and capital flow is very fast. In the context of free trade, high efficiency which is supported by an adequate information system, become a basic need for wining the competition. Indonesia is one player in the world economy, such condition will be a cause of unsteady risk in all of kind of investation. On the other hand, the performance of economy of the farmer of Indonesian is strengthen by the economy reformation. Risk management by participate in the future trading become one the alterative solution. Such a trading forms a real, logic and transparent price because the transaction is performed by open out cry and it could be used as a tool for replacing the price fluctuation. The position in the physic market. Participating in the future trading, farmer, producer and the agricultural player in the first stage be able to increase the bargaining position at the logic level.

Keywords : Public economy, future trading; hedging
